ZARK

COMPLETE STARTUP PROFILE

Business concept • Marketplace model • Operations • Growth roadmap • AI vision

From architectural references to intelligent architectural design.

Executive Summary

ZARK is a proposed digital architectural marketplace that will initially connect people planning to build homes with architects who have ready-made residential architectural plans. The platform will begin with a Kerala-focused collection and aims to make relevant design references easier to discover and purchase.

For architects, ZARK offers an additional channel to earn from previously created designs. For customers, it aims to provide a centralized place to explore residential plans. In the longer term, ZARK intends to evolve from a plan marketplace into an AI-assisted architectural design platform that can help develop personalized projects from customer requirements, site information, and selected reference plans.

ZARK is currently at the pre-launch stage. Approximately 200 Kerala-focused plans have been collected, the website is under development, and the initial investment target discussed is ₹5–10 lakh.

1. Startup Overview

Startup name	ZARK
Industry	Architecture, PropTech, digital marketplace, and future AI-assisted design technology
Initial market	Kerala, India
Expansion ambition	South India, followed by the wider Indian market
Business type	Online marketplace connecting architectural designers and customers
Current stage	Pre-launch; website under development
Existing catalog	Approximately 200 Kerala-focused residential plans
Initial investment target	₹5–10 lakh
Long-term direction	AI-assisted architectural project development

2. The Problem ZARK Aims to Solve

For customers

People planning to construct homes may find it difficult to discover enough suitable architectural references, particularly designs relevant to Kerala and the South Indian context. Design references can be scattered across different sources, and comparing options may take time.

- Finding suitable residential design references can be time-consuming.
- Customers want to explore different layouts and architectural styles.
- Regionally relevant references can be difficult to find in one organized place.
- Customers need clear information to compare available designs.

For architects

Architects invest time and expertise in creating residential designs. After completing a project, they may have limited opportunities to generate additional income from the same work.

- Previously created plans may remain unused.
- Finding new clients requires continuous effort.
- Existing designs may have value for other customers with suitable requirements.
- Architects need additional channels to monetize their work.

ZARK's opportunity is to connect these groups through one organized digital marketplace.

3. ZARK's Solution

ZARK will provide a centralized online platform where customers can explore and purchase residential architectural plans, while architects can upload and sell previously created designs, subject to ZARK's listing and approval requirements.

- A collection of ready-made residential plans.
- Organized categories and product information.
- A browsing and purchasing experience for customers.
- An upload and listing system for architects.
- An administrator review and approval process before publication.

The initial focus will be Kerala-specific architectural references, with expansion into other regions planned as the marketplace grows.

4. Website Structure: Three Main Interfaces

A. Customer Interface

Customers will be able to browse architectural plans, explore categories, view listing details and images, purchase suitable plans, and request additional assistance or customization where offered.

B. Architect Dashboard

Architects will be able to upload architectural plans, provide descriptions and product details, select relevant categories, suggest prices, and submit plans for administrator review.

C. ZARK Administrator Dashboard

The administrator will manage the marketplace by reviewing submissions, checking file formats and naming standards, verifying product information and categories, approving or rejecting listings, deciding final listing prices, and managing published plans.

Approval Workflow

Architect uploads a plan → submission enters the administrator dashboard → ZARK reviews the files and listing information → the plan is approved or rejected → approved plans become visible to customers.

The initial review is a listing-quality and publication check. It is not a structural, engineering, or regulatory certification.

5. Business Model and Revenue

ZARK will primarily operate through a commission-based marketplace model.

Revenue source	Proposed model	Status
Ready-made plan sales	25%–30% commission	Proposed
Customization services	Commission from architects	Percentage not finalized
Customer platform fee	No additional fee	Current proposal

Pricing and Commission Example

For illustration, if a plan sells for ₹5,000, a 25%–30% ZARK commission would equal ₹1,250–₹1,500. The remaining ₹3,500–₹3,750 would be allocated to the architect, subject to the final agreed commercial and payment terms.

Architects may suggest prices, but ZARK will review and approve the final listing price based on plan quality, completeness, and other relevant factors. The average selling price has not yet been established.

The exact customization commission and settlement process remain to be finalized.

6. Copyright and Purchase Policy

ZARK intends to establish clear terms and conditions governing the use of purchased architectural plans. The proposed policy is that a purchased plan cannot be resold or redistributed for commercial resale. Plans will be intended for the specific customer's project and the usage rights stated in the purchase terms.

Architects must have the necessary rights and permissions to list their work on ZARK. The 30-day download-access idea was discussed separately and is not part of the current investor-presentation scope.

7. Current Progress and Readiness

- Approximately 200 Kerala-focused residential plans have been collected.
- The website is under development.
- The three-interface structure has been defined: customer, architect, and administrator.
- The review and approval workflow has been planned.
- The commission-based revenue model has been outlined.
- There has been interest in the concept, but no paying customers have been acquired yet.

The next step is to complete the website, prepare the initial catalog for publication, establish the social media presence, and begin digital advertising. The first launch period will help ZARK measure actual customer response and validate demand.

8. Marketing and Customer Acquisition

ZARK's initial marketing strategy will focus primarily on digital platforms.

- Social media channels, including Instagram and other relevant platforms.
- Paid digital advertising targeting people planning to construct homes.
- Promotional content showcasing available designs and plan categories.
- Online campaigns to build awareness among customers and architects.

The objective is to measure more than traffic. ZARK will evaluate customer inquiries, engagement, purchasing behavior, sales performance, and feedback to understand which products and marketing approaches work best.

9. Four-Phase Development Roadmap

Phase 1 — Marketplace Foundation

- Complete and launch the website.
- Prepare the initial collection of approximately 200 plans.
- Establish customer and architect interfaces.
- Implement the administrator review and publishing process.

Phase 2 — Market Expansion

- Acquire customers and participating architects.
- Improve marketplace operations.
- Increase plan sales and build customer trust.
- Work toward establishing sustainable marketplace revenue.
- Expand the architectural collection.

Phase 3 — Marketplace Growth and Preparation for Innovation

Objective: Establish a strong foundation for the next generation of AI-assisted architectural services.

- Build a database containing approximately 5,000–10,000 ready-made house plans.
- Establish a sufficient revenue stream through the marketplace.
- Build a strong customer base among people planning to construct homes.
- Prepare infrastructure and resources for future AI integration.

Phase 4 — AI-Powered Architecture

Objective: Introduce an AI-assisted system that can progressively develop an architectural project using customer requirements, site information, and a selected reference plan.

- Generate a project brief from customer requirements, site details, and the selected reference plan.
- Generate an initial floor-plan concept.
- Develop a more detailed architectural floor plan.
- Generate architectural elevations.
- Develop a three-dimensional model.
- Progress toward electrical drawings and other professional documentation, subject to professional validation.

10. Proposed AI-Powered Architectural Workflow

1. Select a reference plan — The customer selects a suitable existing plan from the ZARK marketplace.

2. Submit site information — The customer provides plot dimensions, site details, and relevant information.

3. Understand requirements — ZARK communicates with the customer to document preferences, family requirements, budget considerations, and design expectations.

4. Generate a project brief — The collected requirements, site information, and reference plan are supplied to the AI system to develop a structured project brief.

5. Basic floor plan — The system generates an initial floor-plan concept.

6. Detailed floor plan — The initial layout is developed into a more detailed architectural arrangement.

7. Architectural elevations — Elevation concepts are developed based on the floor plan and design direction.

8. 3D model — A three-dimensional representation of the proposed design is developed.

9. Professional drawings — The future system aims to assist with electrical drawings and other technical documentation, subject to qualified professional review.

This is a proposed future workflow. The AI model architecture, technical integrations, implementation process, feasibility, and commercial model have not yet been established.

11. Long-Term Vision

ZARK's long-term vision is to transform the way people discover and develop residential architectural designs. The company will initially focus on making ready-made plans accessible through a centralized marketplace. As the business grows, the collection and customer base are intended to expand, creating a foundation for AI-assisted architectural development.

The long-term ambition is to help customers move from an initial idea and reference plan toward a more personalized architectural project, supported by AI tools and qualified professional review.

BUILD → GROW → COLLECT → AUTOMATE → DEVELOP

12. Investment Opportunity

ZARK has identified an initial investment target of ₹5–10 lakh. The proposed investment is intended to support launch and growth, including website development, marketing, operational requirements, and preparation for expansion.

The investment opportunity is based on establishing the marketplace, validating customer demand, growing the architectural catalog, and developing the foundation for future AI-assisted services.

The equity offered, company valuation, investment structure, detailed spending allocation, and financial projections have not yet been established.

13. Strategic Advantages and Opportunities

- Regional focus: beginning with Kerala-specific residential architectural references.
- Two-sided marketplace: creating value for both customers and architects.
- Architect monetization: providing an additional channel to earn from previously created plans.
- Quality-controlled listings: administrator approval before publication.
- Commission-based revenue: a straightforward transaction-driven model.
- AI expansion potential: using the marketplace as a foundation for future AI-assisted architectural development.

These are intended strategic advantages and opportunities, not yet proven competitive results.

14. Business Decisions Still to Be Finalized

Area	Current position
Average plan selling price	Not decided
Number of participating architects	Not established
Rights and permissions for all 200 plans	Needs confirmation
Customization commission percentage	Not decided
Customer payment and architect settlement process	Needs definition
Monthly sales targets	Not decided
Customer acquisition cost	Not established
AI development technology and model architecture	Not finalized

AI development budget	Not estimated
Expansion timeline	Not decided
Investment equity and valuation	Not decided

15. ZARK in One Paragraph

ZARK is a Kerala-origin digital architectural marketplace that aims to connect homebuilders with architects through a centralized collection of ready-made residential plans. By allowing architects to monetize previously created designs and providing customers with convenient access to regional architectural references, ZARK intends to create a mutually beneficial digital ecosystem. Starting with approximately 200 collected plans and a commission-based revenue model, ZARK aims to grow its marketplace to 5,000–10,000 plans, establish a sustainable customer base, and eventually introduce AI-assisted architectural project development. Its long-term ambition is to evolve into an AI-powered architecture platform serving customers across India.

Important Implementation Considerations

AI-generated designs and technical drawings must be reviewed and verified by appropriately qualified architectural and engineering professionals before they are treated as construction-ready documents. Local site conditions, applicable building regulations, structural requirements, and statutory approvals must be addressed by the relevant professionals.

The marketplace, AI workflow, and commercial model described in this document include proposed plans and future ambitions. They should not be presented as already implemented capabilities.
